

DESCRIPTION

Electronic **Δp-two-step controller** with 2 relay outputs and **3 analogue outputs 0 -10 V, 0 -20 mA and 4 -20 mA**. Universal power supply for 230-240 VAC and 110-120 VAC and 24 VDC in one unit.

Examples: air conditioning and ventilation systems, clean room technology, filter control, level control, flow control, industry, etc.

At the pressure connection pieces, the differential pressure (+ and -), the positive pressure (+) or the negative pressure (-) are measured and displayed, when the selective switch is in neutral position. The output of the actual **Δp-value** takes permanently place independent of the position of the selective switch. The types with a ± mbar pressure range make measurements with a reverse in the pressure direction possible. Example: if a positive pressure is applied to the positive pressure connection piece (+), the digital display shows positive pressure values. If a negative pressure is applied to the positive pressure connection piece, the display shows negative pressure values. The **set points** for the controller are adjusted via the potentiometers **REGLER MIN** and **REGLER MAX**. They are indicated by the display, when the selective switch is in the corresponding position. Two further set points, adjustable at the potentiometers **ALARM MIN** and **ALARM MAX**, serve to give an alarm, when the actual pressure value exceeds the maximum permissible value. This is signaled by the LED **ALARM**. By turning the the potentiometer **ALARM** into left-hand position, the lower set point is deactivated. The LED **REGLER** emits light signals, when set point **REGLER MAX** is reached and is only deactivated again, after set point **REGLER MIN** has been reached and exceeded. The integrated adjustable electronic **Δp-damping** of the switching point (set point) and the display represents an important functional advantage for all ranges of application with permanent air turbulences. A short circuit-safe analogue output that can be either **0-10 V, 0 - 20 mA or 4 - 20 mA**, transmits an output signal that is proportional to the pressure and can be used for further process controls.

FEATURES

- Universal electric power supply for 230-240 VAC and 110-120 VAC and 24 VDC in one unit
- Pressure sensor overload-safe and temperature compensated
- Adjustable Δp-damping 1s - 30s
- Extreme range of ambient temperature - 20°C to +60°C
- Reliable function even during extreme mains fluctuations
- Two-step controller, fail safe relay outputs
- 3 short circuit safe analogue outputs 0-10 V, 0-20 mA and 4-20 mA
- Housing protection class IP65
- High reliabilty due to "burn in-function"
